

ION EXCHANGE RESINS (IEC)

Reliable. Robust. Reproducible.

ProtPure IEC resins are high-performance, agarose-based ion exchangers designed for efficient and reproducible purification of proteins and biomolecules.

SP AGAROSE

Strong Cation Exchanger

- Binding capacity: ≥ 100 mg Lysozyme /mL
- Compatible with NaOH, urea, guanidine

Q AGAROSE

Strong Anion Exchanger

- Binding capacity: ≥ 140 mg BSA /mL
- Compatible with NaOH, urea, guanidine

DEAE AGAROSE

Weak Anion Exchanger

- Binding capacity: ≥ 90 mg BSA /mL
- Compatible with NaOH, urea, guanidine

Engineered for consistent performance in lab to industrial-scale processes.

High Binding Capacity

Excellent capacity for high recovery and process efficiency.

Excellent Stability

Stable across a wide pH range and in the presence of common chemicals.

Reproducible Performance

Consistent batch-to-batch quality ensures reliable and scalable outcomes.

Scalable Solutions

Suitable for research, pilot and large-scale purification workflows.

Process Compatibility

Compatible with NaOH, urea, guanidine for effective CIP.

APPLICATIONS

Purification of proteins, nucleic acids & other biomolecules

Industrial-scale chromatography workflows for high-speed purification

High selectivity and reliable performance

Reproducible results across diverse purification requirements

TYPICAL SPECIFICATIONS

Parameter	SP Agarose	Q Agarose	DEAE Agarose
Matrix	Agarose	Agarose	Agarose
Particle Size Range	45 – 165 μm	45 – 165 μm	45 – 165 μm
Type	Strong Cation Exchanger	Strong Anion Exchanger	Weak Anion Exchanger
Binding Capacity*	≥ 100 mg Lysozyme /mL	≥ 140 mg BSA /mL	≥ 90 mg BSA /mL
pH Stability (CIP)	2 – 12	2 – 12	2 – 11
Chemical Compatibility	NaOH, Urea, Guanidine	NaOH, Urea, Guanidine	NaOH, Urea, Guanidine

* Binding capacity depends on ligand and assay conditions.
